## DETAILED ACTION

### *Election/Restrictions*

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-26 and 37, drawn to a pathogen detection system, said system comprising an immuncapture chamber and DNA analysis mechanism coupled thereto.

Group II, claim(s) 27-36, drawn to a method of detecting pathogens via PCR and CE.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

PCT Rule 13.2, which defines the circumstances when the requirement for unity of invention is met, discloses that such would be fulfilled only when there is a technical relationship among those inventions involving one or more of the same or corresponding *special technical features*. The same section defines *special technical feature* as a feature which defines a contribution which of each of the claimed inventions, considered as a whole makes over the prior art.

Such technical feature has been determined to be a microfluidic device which comprises chambers for immunocapture and DNA analysis module coupled thereto.

Art Unit: 1637

However, Burns et al. (U.S. Patent No. 6,379,929) disclose a microfluidic device which comprise antibody/biotin bound probes and nucleic acid detection modules coupled thereto.

In addition, Wooley et al. (Analytical Chemistry, 1996, vol. 68, pages 4081-4086) disclose the motivation to employ PCR amplification and CE (capillary electrophoresis) for the detection of the nucleic acids.

Therefore, it is deemed that the special technical feature of the instant application is found to be obvious over the at least above-cited references, rendering the instant application lacking unity of inventions.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
